Thanks for the input.
It was very helpful.

I was still confused about draw_widgets & windows.

What I ended up doing was to have 2 window/draw_widgets
contained in one top-level-base. I think that was suggested
to me, but I was still confused about windows & draw-widgets,
so I didn't understand.

Thanks for the help!

Now I need to come up with some _real_ assignments for myself
so my employers will let me keep doing this stuff ! :)
