Hello All,

I tried the structure completion in IdlWAVE by adding

```
(add-hook 'idlwave-load-hook  
         (lambda () (require 'idlw-complete-structtag)))
```

in my .emacs file and then proceeded to add the
idlw-complete-structtag.el file to /usr/local/share/emacs/site-lisp/
where the rest of the idl*.el files are. Yet when I load up Emacs
I get the following error:

File mode specification error: (file-error "Cannot open load file"
"idlw-complete-structtag")

OS: Linux Redhat 8.0

Emacs Version: GNU Emacs 21.2.1 (i686-pc-linux-gnu, X toolkit, Xaw3d scroll
bars) of 2002-08-28 on astest

IDL Version : 5.5

Any suggestions? Thanks,
Karthik.
