hi,

I have a set of images. I plot the histogram for each image and from the image calculate the threshold value. I want to move a cursor in that histogram plot and obtain the x-axis value at the cursor position in that plot. And i want to try sliding on that curve and for each value along x-axis i want to obtain a threshold value.

Can anybody please tell me how to do it???

Thanks for ur time in advance,

- Aks.
