---

Does anybody know how to set the X windows defaults under Linux using Gnome? I tried creating the file ~/.Xdefaults, but it doesn't appear to be paid attention to (except via "xrdb -merge").

Thank you,

William Thompson

P.S. The manual discusses settings for `idl.retain` and `idl.gr_visual`, but it doesn't look like there's anything equivalent to `DEVICE,DECOMPOSED=0`. Is that right?
