Subject: .Xdefaults in Gnome on Linux Posted by thompson on Thu, 08 May 2003 22:45:47 GMT View Forum Message <> Reply to Message

Does anybody know how to set the X windows defaults under Linux using Gnome? I tried creating the file ~/.Xdefaults, but it doesn't appear to be paid attention to (except via "xrdb -merge").

Thank you,

William Thompson

P.S. The manual discusses settings for idl.retain and idl.gr_visual, but it doesn't look like there's anything equivalent to DEVICE,DECOMPOSED=0. Is that right?
