I have updated my free Display procedure.

Update includes:

1. Changing fonts and their sizes independently on axes and legend
2. Exporting the plot to PNG file
3. Added ability to show grid lines
4. Running Display in the Hidden mode.

The latter is used when one needs to generate a good-looking plot on a remote server and write it to a file, without viewing the result. Hidden mode does not render the graphics window over the network, which is slow, and the output file is produced almost instantly.

The HTML instruction page

http://www.ainaco.com/idl/idl_library/display.html didn't get updated to show the new features. I plan to do that soon.

The Display procedure is available from

http://www.ainaco.com/idl/idl_library/display.pro

Thank you for using Display!

Pavel
