> Does the order of the !P.MULTI= and DEVICE, /... calls matter?

Apparently not.

But I still think an argument can be made that this is what !P.MULTI is *suppose* to be doing. It takes care of most of the details for you. Most of the time, if you are making smaller plots, you need smaller text. If you *don't* need smaller text, then pay attention to all the details yourself. It seems like a reasonable trade-off to me.

Cheers,

David

P.S. And Mark is right. The easiest thing to do is just create encapsulated PostScript files and arrange them however you like in whatever word processor you happen to be using. This is FAR simpler than mucking about with this.
