Subject: IDL routine for compress raster-8 image? (lossless)
Posted by ratel on Mon, 06 Feb 1995 13:10:36 GMT

Status:

   Actually I get 320x240x8bits (~75kB) image via IDL on PC.
   I hope to compress data and store thhem into a HDF file.
  But RLE and IMCOMP compression with DFR8_ADDIMAGE is not a good
   choice for me.
   (i.e. I search a lossless compression and
       big compression because 60 images x 75 kB ~ 4.5 MB)

  Problem:

   I have a code in C langage, but is not possible use CALL_EXTERNAL
    because maximum data with DLL is 64 kB.

  Question:

   Do you known a IDL routine for compress raster-8 image? (lossless)

Thanks,

Gilles Ratel
