A while ago I read a message about this test.
Now, I am experiencing the same problem. I am using two array of
different lenghts (as Online Help state possible) but I am unable to
run rs_test.pro properly. This routine return me error!
By the way, I am sure the array are
x=[1,47]
y=[1, 33]
Where do I fail?
Does the routine work right?
Cheers,
Tobi
