Hi David,

I was using 'vi' to add some comments at the top of the code and somehow I must have commented out a line in the actual code! I'm a novice with vi.

Anyway I have a real question: Say within prog1.pro I call r2.pro and r3.pro, r2.pro is compiled at run time but I get an error for r3.pro. The error saying that it can't find the file r3.pro. I go back and compile r3.pro then run prog1.pro again I don't get this error. All three routines are in the same directory so why do I get an this error?

Thanks
