Subject: how did this happen? Posted by Tapuosi Lotoaniu on Fri, 13 Jun 2003 03:54:45 GMT View Forum Message <> Reply to Message

Hi,

My data processing GUI has decided to stop working and I can't figure out why? The main program is called CRRES\_WIDGET. Within this program are a number of event handlers. When I run it now I get this error:

- > pro CRRES\_WIDGET
- > % Procedure header must appear first and only once: CRRES\_WIDGET
- > At: /private/crres/MANUALCRRES/CRRES\_WIDGET.pro, Line 567
- > % 1 Compilation errors in module \$MAIN\$.

I know what this error means but I have not altered the routines. So how do you get an error like this if you have not changed anything?

Thanks.
