Hi,

My data processing GUI has decided to stop working and I can't figure out why? The main program is called CRRES_WIDGET. Within this program are a number of event handlers. When I run it now I get this error:

```
> pro CRRES_WIDGET
```

```
>           ^
```

```
> % Procedure header must appear first and only once: CRRES_WIDGET
```

```
> At: /private/crres/MANUALCRRES/CRRES_WIDGET.pro, Line 567
```

```
> % 1 Compilation errors in module $MAIN$.
```

I know what this error means but I have not altered the routines. So how do you get an error like this if you have not changed anything?

Thanks.
