Although IDL2AVI routine can't read MPEG-1(2) or QT directly, you can use free 'frame server' Avisynth

(<http://www.math.berkeley.edu/~benrg/avisynth.html>)

that allow reading MPEG or QT from programs that can read just AVI.

You can also download this from RSI user-contributed library -> Data readers and writers -> avi.zip at

(<http://www.rsinc.com/codebank/search.asp?FID=139>)

For writing Mpeg-1(2) with IDL2AVI you can use DVMPEG (I think even demo) from

(<http://www.darvision.com>). After installation it appends mpeg-1(2) codek to multimedia subsystem, so you can create mpeg like AVI.
