I think you mean SCROLL. SCROOL is something that comes
out the side of a baby's mouth just as your mother-in-law
bends over to kiss him. :-)

If it comes down to an educational issue (i.e., train the
user to click the proper place on the slider vs. train
yourself to write a compound widget), I know which one
I'm going to vote for as being most likely to succeed.

Cheers,

David
