Esa Riihonen wrote: > Hi all!
 I wonder whether someone might have bumped on this problem before and even perhaps have somekind of solution.
 As I understand, Postscript files produced by IDL have color coded as RGB. However several (propably most) journals require CMYK-code. I have a clumsy solution, load the file in CorelDraw and make the changes there this is far from perfect as it among other things usually require many trials e.g., going back to IDL for changing the line thicknesses and such.
> So has anyone a better solution?
 Our IDL environment is 'IDL Version 5.6, Compaq Tru64 (OSF alpha m64)' Also Linux and even Windows based solutions would be OK.

 PS. I think provision of CMYK-coded PS would be much needed in the future IDL-versions.
I have already done a feature request it got's a high priority. Please do the same.
best regards
