
Subject: UNIX v. Windows Filepaths

Hi everyone....

A quick question. I've created code and after it is installed on a user's machine I want to make the current directory one of the directories included with the code. For UNIX I've added the following code:

```
CD, './source', current=currdir
```

Since I have never used IDL for Windows I'm not sure how to add a line for Windows path. Any help would be greatly appreciated!

Thanks,

Justin
