Hello everyone.

Just wondering if any other people are doing atmospheric research. What I'm looking for is an idl routine to plot atmospheric temperature and dew point on skew T vs. Log p diagram. I have developed a hodograph routine if someone wants to trade a skew T/Log p routine for it. There are very few people in Canada who are using idl for atmospheric research but the numbers are growing. Can anyone help someone in desperation? Thank you for the help.

John.
