In the post I saw this

In article <3hspmc\$t8a@kwuz.nerc-keyworth.ac.uk>,
> s = (size(image))(1:3)

I thought that this was maybe an IDL feature, but it turned out to work with PV-WAVE v5.0. I was stunned. I've looked high & low through the manuals to find out more about this feature,. I looked in everywhere I could think of but could not find any reference to this feature. So could some kind soul help me out of misery and point out where in the PV-WAVE manuals this feature is dealt with.

We've just installed PV-WAVE v5.0 & don't have the corresponding manuals yet. The most recent manuals we have are for v4.2 - so could you direct me to this version of the manuals assuming the feature existed then.

Many thanks in advance to anyone who takes pity on me,

John Black.
