---

A little while back, there were some posts about printing out color-syntax copies of idl code.

I dug around and found a old newgroup post that described a useful function that sounds like it would accomplish the task, alhtough I haven't used it.

Here is the link that I found:

< <http://www.kilvarock.com/freesoftware/utilities/printa2ps.htm> >

Description:

PrintA2PS

When called as a macro under the Windows IDLDE this will create a chroma-coded print of the source code of the active IDLDE Edit window.

Apart from the IDL PrintA2PS.PRO routine, it uses the common A2PSutility to do the chroma coding, and a freeware utility called PrintFile to handle the printing.

PrintFile comes from : <http://www.lerup.com/printfile> but can be downloaded below.

A2PS-DOS.EXE is slightly over a megabyte is size and should be downloaded from the link at the bottom of this page.

Cheers,

bob
