Subject: Installing IDL 6.0 on Mac OS X

I've read in the IDL documentation that a software requirement for IDL
6.0 on a Mac is the X11 window manager which can be downloaded from
Apple's website. Is this the same as OroborosX? This computer
currently has OroborosX which runs IDL from within it, but I was
wondering if there might be a simpler, cleaner way to do it now with
IDL 6.
