Could someone help me about the function SIGMA ? The problem is the following :

We have IDL 3.5.1 installed on two IBM RS6000 workstations and one DEC ALPHA/OSF. Upon invocation of SIGMA, the ALPHA/OSF IDL version works correctly, while on the IBM the routine SIGMA is said to be unknown ! Another strange thing is that on those two platforms the routine SIGMA is presented as a userlib component while it seems not exist on each platforms any .pro file containing a definition for the SIGMA function.

So

WHERE IS SIGMA DEFINED ?
