I ask questions on this newsgroup so infrequently that it seems a shame to answer my own question, but there you go...

Thanks to the guys at RSI, who appear to get to work even before I do, I've figured out what my problem was. It's the ol' Hershey font is -1 instead of the normal 0 for the default case problem. If the initial value of an ENUMLIST property is -1, then it doesn't put anything into its "default value" space initially.

Now I've got it all sorted out and the property widget works like a champ. I'll be working on a training program today, though, to get all my users used to using FONT=0 if they want a Hershey font. :^)

Cheers.

David
