
Subject: xdemo crashes twm in IDL 2.3

Having just upgraded from 2.2.1 to 2.3.0 and trying to get the new improved xdemo package running, I found that xdemo causes twm to croak with a segmentation violation, which means that most people's X11 session comes to a screeching halt. The problem comes after the call to XMANAGER. A quick test shows that olwm does not crash.

This is on a Sun 3/260 running 4.1.1 and X11R4 pl 18.
