## Subject: procedure for plotting streamlines in idl
Posted by nolf on Tue, 07 Mar 1995 22:04:20 GMT

I was wondering if anyone was aware of a procedure for plotting streamlines
in IDL.  The functionality of what I'm interested in is the same as the
STRMLN routine in NCAR graphics.  I know that PV-WAVE has a VELOVECT procedure
that is similar to NCAR's VELVCT routine, but I'm having trouble locating
a streamlining procedure.

Any help would be appreciated.
