Subject: Re: Compiling programmes within programmes. Posted by Karthikayan Balakrish[2] on Wed, 08 Oct 2003 21:37:43 GMT View Forum Message <> Reply to Message

I may have misread your post, anyway here is your original message:

It looked something like this:

PRO COYOTE_MAKE
Resolve_Routine, 'coyote1'
Resolve_Routine, 'coyote2', /ls_Function
Resolve_Routine, 'coyote3'
...
Resolve_All
Save, /Routines, File='coyote.sav'
END

I just put all my program modules at the beginning to make sure they are compiled (this part only took 4-5 iterations:-), the Resolve_All routine at the end catches all the library routines I am using, and I am set. Now, as I add modules to the application, I just include the name in here and I can make a save file whenever I need it by typing "coyote_make" at the IDL command line. Pretty slick, I think.
