I forgot to say that when I run the code I get this message if I use the TVSCL command:

```
% Program caused arithmetic error: Floating underflow  
% Program caused arithmetic error: Floating overflow  
% Program caused arithmetic error: Floating illegal operand
```

while I get this one using TV:

```
% Program caused arithmetic error: Floating underflow  
% Program caused arithmetic error: Floating illegal operand
```

Don't know if this makes sense but I'm just a beginner in IDL. Thank you.
