Has anybody used the write_pict utility to generate pict files and opened them into a mac.

I generate the pict files on a PC and then FTP them (using binary transfer) to a Mac. However these files cant be opened on the Mac. I have no problem with TIFF files they open fine. However, tiff files are about 10 times the size of a Pict file I would like to generate the picts as I am dealine in time series of images.

Thanks

Barr-Kum
