Could any one please tell me how I can read data in from a PVWAVE batch file.

The general idea is:

```
X = FLTARR(100)
```

```
READ,X
```

```
1 2 3 ... 100; data to be read in.
```

```
PRINT,X
```

Much like data would be read from a VMS DCL file.

Thanks in advance.

Hugh Evans.
