Subject: Finding if a structure tag name is defined?

I want to know if a given keyword has been passed down via _extra, so
I said "if (n_elements(e.c_linestyle) ne 0)" which of course doesn't
work because if it isn't there you can't say e.linestyle (bring on
perl...). I can use tag names to get all the tags, then search through
for a match, but that seems silly and ugly. What is the correct way
to find if a given structure has a certain tag in it? (And why
couldn't I find the answer buried within DF's site ;-)?

-W.
