Hi, perhaps you can help me here.

Is there a way that I (in the case, the program) can know which is the current color table?

The program provides the function XLOADCT in which the user can change the color table. And I would like to know which one is in use. I have a feeling that that has to be somewhere, :). I tried to see if there is any parameter in XLOADCT and LOACT that provides me the number of the color table in the use. I believe that information is somewhere, but where? I looked also in the graphics system variables but I don't find it. Seems to have everything but the index of the color table in use.

Cheers, N.
