I have a simple question. Is it possible to create a .sav application from a procedure including command line arguments? I know that making a .sav file from a procedure like below is absolutely possible :

```
pro example
```

```
.....
```

```
end
```

But, isn't it possible from a procedure like below? :

```
pro example, a, b
```

```
.....
```

```
end
```

I know that IDL VM doesn't allow access to command line. Does it mean the answer to my question is negative?
