Hello

I have a strange a problem with my idl 6.0, not sure why but may be it is a bug.

I have a problem with opening multi-frame tiff images. When I try with read_tiff it crash idl with a segmentation fault error. The problem was seen with idl6.0 platform windows and linux. I did try to open the same image in Sun (idl 5.3) and it works.

An example of the image is here:

<http://www.forbrf.lth.se/~alan/divers/drop1.tif>

Does anyone have the same problem, any help is highly appreciated.

Best regards

Alaa
