Two little questions:

1.. Sometimes I use the function PICKFILE. Don't ask where did I get it, but I did. The fact is this function doesn't appear on my quick reference. Two issues on my question: what parameters to this function (as I want to insert a limitation on the files to open and maybe other things) and how in IDL is going to get this function?

2.. His there a way to display text (in the case a index number) on window draw type, made with direct graphics?
