Hello

I wonder if someone else has encounter the same problem as me.
With older versions of idl (5.3) I could open multi-frame tiff images
with read_tiff. But not with idl 6.0, it says segmentation fault.

a copy of the tiff file is in:

<http://www.forbrf.lth.se/~alan/divers/drop1.tif>

I did try with linux and windows, with no success. In windows It
crashed my idlde program.

I'm very grateful for any help I will get.

Best regards.
