
Subject: Plot symbols and symbol tables

I have recently started making multiple x-y curve plots with WAVE. I sometimes have a need to plot up to 10 curves on a single plot. I was disappointed to find that WAVE only has 7 built-in symbols and some of those are not very pleasing aesthetically. Also, the LEGEND command which is provided for creating symbol tables produces a double set of symbols if you specify the symbol type as a positive number. I am interested in knowing if anyone has created a better and/or more extensive set of symbols, and a better procedure for building a symbol table.

On another subject, I would like to talk to anyone who has some experience with using WAVE in a real-time application. We are evaluating methods for displaying experimental data on both local and remote workstations in real time.

Replies on either subject would be appreciated.
