Greetings:

I upgraded to MacOS 10.3 (Panther) last night and IDL got trashed. In the process of reinstalling it, including all the Unix config files/scripts, I discovered that the shell had been changed to bash from the tsch that it had been. Since my Unix skills are limited and since the info pages at rsinc.com are written for the tsch shell I am at an impasse.

I need to know how to reset the default shell and get the scripts reset. I think I do the latter by editing the .cshrc and .tcshrc file in the Users/MyDir/ to include:

```
source RSI-DIR/idl_6.0/bin/idl_setup
```

and/or find out where .bashrc file is and how to set its script for the equivalent of the above command.

Thanks

Patrick Ford
