
Subject: SORT needs minor fix

Just letting out my frustrations. I have a routine that uses SORT,
and I happened to run across a circumstance where I passed in a scalar
instead of an array to the PRO. I found that SORT does this:

```
x = 10
print, x(SORT(x))
% SORT: Expression must be an array in this context: X.
x = [10]
print, x(SORT(x))
10
```

Well, SORT should be able to handle that! Hmmmm...
