Yes, using vim. There may be basic highlighting in vi, but vim is really what you want. To turn on syntax highlighting, you only need to do ':syntax on' (without quotes) from within vim and it should automatically recognize the file type and highlight appropriately. If that doesn't work, try ':cal SetSyn("idlang")' (without quotes) instead.

If that fails too, then you probably don't have the IDL syntax file installed on your system. On my systems, the IDL syntax file is /usr/share/vim/vim??/syntax/idlang.vim where ?? is the version number of vim. If you can't locate the file, just upgrade vim. Not only will you have a better vim, but I know that it comes with the IDL syntax file already in place.

HTH,

Mike W
