I have created a .sav file from my project (hsi_quickbird.prj).
I have put hsi_quickbird.sav in the save_add folder and I have added
these lines to the file envi.men:
0 {New function}
  1 {Pansharpening} {hsi_QuickBird3} {envi_menu_event}

but when in envi I click on New function->Pansharpening it doesn't
work and in the idl output log it appears:
% Restored file: HSI_QUICKBIRD3.
% Restored file: SAVP.
unknown uvalue: [hsi_QuickBird3]

Can someone help me?
  thanks
