Sorry to but into the middle of this debate, but can't you use the YMARGINS keyword to adjust the position? That shouldn't complicate your multiplot.

From your example, I tried:
!p.multi=[0,3,3]
for i=0,8 do begin
plot, x, y, yrange = [-90, 90], /ystyle, /xstyle, \$
ytickformat = "(a1)",title = title, \$
xtitle = label, xrange = [0, 100], \$
ticklen = -0.03,ymarg=[6,3]
endfor

... and had no problem with the plots ... although the font was small.

Happy New Year--Ken
