Sorry to but into the middle of this debate, but can't you use the
YMARGINS keyword to adjust the position? That shouldn't complicate your
multiplot.

From your example, I tried:

```
!p.multi=[0,3,3]  
for i=0,8 do begin  
  plot, x, y, yrange = [-90, 90], /ystyle, /xstyle, $  
  ytickformat = "(a1)", title = title, $  
  xtitle = label, xrange = [0, 100], $  
  ticklen = -0.03, ymarg=[6,3]  
endfor
```

... and had no problem with the plots ... although the font was small.

Happy New Year-
