Hello there!

I wrote an IDL routine to accomplish Level 1B AVHRR channels 1 and 2 radiometric calibration and then a calibrated image is created. Then, I try to apply the ENVI_AVHRR_WARP_DOIT georeferencing routine in this image, but it doesn't work. I've seen the WARP routine must be used only to unchanged Level 1B files.

Does anybody know how to apply the georeferencing routine to changed Level 1B files?

This procedure is being done because I've read that we must make the calibration before georeferencing any image.

Best Regards and Happy New Year for all!!
