Heh -- I made a usenet group WAY back in 1991 and it took me FOREVER to set
it up -- do you still have to send some weirdly formatted email to the
Usenet gods someplace to beg for a usenet group? I'm sure there are easier
ways to do it nowadays, but the listserv setup from my university took all
of 20 seconds to create.

There used to be (still is?) an RSI ENVI listserv, but I got messages
bounced from it a couple of times recently, and haven't received any emails
from it in forever. On top of that, I don't think they archived the posts,
so there was no way to go back and look stuff up (thank you google!) They
have an online forum that is pretty much impossible to find from their
website, so no one uses it. Ah well!

--j

P.S. I sense some issues with ENVI posts here -- it IS an IDL add-on after
all!

P.S.S. Whats up with comp.lang.idl --> is this not for IDL programming?
What is "pvwave" anyway?
