Please forward this to anyone who might be interested:

We have created a listserv to facilitate discussion about Research Systems Inc.'s ENVI remote sensing analysis package (<http://www.rsinc.com>). All questions/comments/discussions about the theory and application of this software are welcome.

To subscribe, please send an email to listproc@ucdavis.edu and include in the body of the email:

sub starserv-envi@ucdavis.edu (e.g. "sub starserv John Smith").

To post messages, send an email to starserv-envi@ucdavis.edu. Archives of past discussions can be found at <http://listproc.ucdavis.edu/archives/starserv-envi/>.

To unsubscribe from the list, simply send an email to listproc@ucdavis.edu with the body of the email:

unsub starserv-envi@ucdavis.edu

Please make sure you send the unsubscribe request from the same email account you used to subscribe, otherwise you won't be taken off the mailing list.

This list is run by the Center for Spatial Technologies and Remote Sensing (CSTARS) laboratory at the University of California, Davis. For information on our lab, please visit <http://www.cstars.ucdavis.edu>. Any questions about the listserv or our website, please direct to www@cstars.ucdavis.edu.
