Subject: Need help passing string data using CALL_EXTERNAL.

I am attempting to pass 2 filenames (strings), 3 integers, and a
double entered in the parameters section of CALL_EXTERNAL to a DLL I
have created. I have no problems passing the integers and the double
using the portable calling convention, but I am having significant
difficulty figuring out how to pass strings. I have only recently
begun to learn IDL, so I am not that familiar with it. Any help would
be greatly appreciated. Thanks
