
Subject: (Not) Finding functions running on VM

Hi.

I'm using the function `dialog_write_image` in an application that is supposed to run in virtual machine. But it happens a strange thing. Since this dialog box has many option, as try to write in bmp, srf or ppm it gives an error message saying that it couldn't find the functions `wite_bmp`, `write_srf` and `write_ppm`. And if I do the same running in `idlde` (i.e. with the license) I get no error, he finds the functions.

Anyone have an idea for what's going one? Anyone had the same problem? Or this is a case for Super-Rsi?

Cheers,

Nuno.
