I have a problem with coordinated transformations of IDLgrImage and other objects, e.g. IDLgrContour.

Does anybody know why rotating behaves like it does?

In the small example:

```
img=read_png( filepath('mineral.png', SUBDIR=['examples','data']))  
m=obj_new('IDLgrModel')  
m->add,obj_new('IDLgrImage',img)  
m->add,obj_new('IDLgrContour',img,color=[255,0,0])  
xobjview,m,/block
```

rotation shows a quite bizarre behaviour.

I would expect that the image moves like one level of the contour object.

regards
Karsten
