I think you meant:

http://www.dfanning.com/fileio_tips/lgfiles.html

I did read that thread, and the underlying issues described seemed to be pretty windows specific. I don't think Win32 issues will have a direct metaphor in FreeBSD, will they? I mean not beyond the inability to get a 64 bit pointer, that is. Again, I don't see what my arrays top out at 1.6 GB instead of 1.9 GB. in Mac OS X.
