Dear Sir,

I'm making color image to Postscript output file.

Although I could see the color images/figures in the windows, the PS file doesn't show the color images/figures (just black & white) when I made it as a PS output file. The computer system is Linux. Could someone help me?

I'm usually writing the program like this...

```
;=====
IF strlowercase(!version.os) EQ 'linux' THEN BEGIN
  device, true_color=24
  device, get_visual_depth=depth
  device, true_color=depth
  window, /free, /pixmap, colors=-10
  wdelete, !d.window
  device, decomposed=0, retain=2
ENDIF
;.....
LOADCT, 39
```

```
SET_PLOT, 'PS'
DEVICE, /ENCAPSUL, BITS_PER_PIXEL=8, $
  Filename='xxx.ps', xsize=16., ysize=16.
!P.MULTI=[0, 1, 1, 0, 1]
```

```
DEVICE, /CLOSE
```

```
;=====
```

Thanks.

Son
