Hi Pepijin,

Hmm, the whole batch code is quite long ...and the program I use is just a sub sub routine...the SAVE file is arround 130MB big

but I found out, that if I'm setting !map.a=1, the I get some results..but the geocoding is not accurate, some shift is the fact.
!MAP.a is the only parameter which is different comapred with !MAP.a from not being in the batch modus...
